

How to build the Display Unit

1

Fold the flat cardbox like a square box.
Insert the two little sleeve in the
corrispetives holes

2

Fold the front part towards the inside,
leaving the two little tabs at the edge
pointing towards the outside

3

Fold the two sides, making sure the little
tabs get stuck in the appropriate holes

4

Now fold the back of the box, this will fix
all the other sides, adjusting the little tabs
in the holes

5

Lift the two pieces in the middle of the box and insert the opposite piece. This will create the base for the two tiers

6

Now, take this piece and fold it where the three folded lines are. This will create the tiers. Fold it like in the photo and insert in the structure.

7

Last, insert the top of the display with the design.

Please contact us if there is any issue in building the display. We could also share a video if that helps.
